

CR-20[®]

INSULATION & FLEECE BACK MEMBRANE ROOFING ADHESIVE FOR LOW SLOPE COMMERCIAL ROOFING

Polyset CR-20 is a low-rise, two-component polyurethane foam adhesive designed for speed and simplicity. Part of the Polyset product line of adhesives and commercial roofing sealants.

PROVEN & TRUSTED FORMULA, specifically designed for the application of adhering fleece back membrane to insulation boards.

FAST & RELIABLE SPATTER application method.

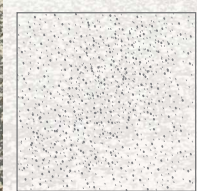

BEAD application for adhering insulation & cover boards when one adhesive product is desired.

VARIOUS SIZE OFFERINGS from small 6 square kits to NEW 76 square refillable systems.

NO POWER required, allowing for easy transportation.

APPROVALS: UL-R20817, FM, Miami-Dade NOA, FBC Product Approval

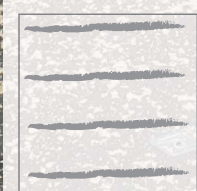

COLORWISE[®] Temperature Warning Nozzles - shows the chemical is being applied at the proper temperature.

Displays proper spatter method

SPATTER PATTERN METHOD

To achieve optimum results, spray pattern should be similar to the action required when hand watering a flower bed. This allows us to create a fully adhered membrane attachment.

Displays proper bead method

BEAD METHOD

When one adhesives product is desired, CR-20 can additionally be used to adhere insulation and cover boards.

The patented Handi-Gun dispensing provides speed and simplicity to the application of CR-20.

Nozzle changes from clear to blue, indicating the chemical has reached a cold temperature, below 60°F (18°C), and the adhesive should not be dispensed until chemical is back to recommended temperatures.
*See TDS for product specific temperature recommendations.

PROVEN FORMULA

After using CR-20 on multiple commercial and government jobs, the speed, ease and appearance of the spatter application has Scarborough Industries sold on CR-20 for fully adhered fleece back jobs.
